

Basic information security policy

TOKYO R&D Co., Ltd, recognizing the importance of safeguarding its customers as well as its own information assets as a management priority, strives to maintain appropriate information security levels and improve upon it by adhering to the below principles.

1. Compliance

We comply with laws, guidelines, contractual obligations, and social standards related to information security.

2. Maintenance of a Solid Management Base

We shall strive to maintain a solid management base through the appropriate management and protection of information assets to ensure market competitiveness and business continuity.

3. Establishment of management system

We are establishing a management system by setting up an organization tasked with information security management, defining provisions and conducting any other tasks necessary in the establishment of the above system.

4. Employee training

All directors and employees involved in our business activities undergo information security literacy training.

5. Continuous improvement

We shall regularly evaluate and revise as well as continually maintain and improve upon the above activities.
